LAB PREP ANSWER SHEETS: CELL MEMBRANE STRUCTURE AND FUNCTION Lab Prep Exercise A1: Interpreting an Experiment with Decalcified Eggs Methods We assigned 10 eggs to each treatment group. Why is it important to replicate an experiment? It is important to replicate an experiment because it allows us to check our work for any errors by reducing variability in experimental results.

Repeatability – when the experiment is repeated by the same person, using the same equipment and the results are close together. Reproducibility – when the experiment is carried out by different persons, using different equipment and the results are close together. True value – a perfect value of the quantity, eg mass, volume, temperature ...
