Astm E83 – 10a Standard Practice for Verification and Classification of Extensometer Systems An extensometer system may be one of three types. This is especially true with optical extensometers which may be adversely affected by air density changes associated with thermal gradients and turbulence, environmental chamber windows, or specimen changes due to the environment.

according to standards **Astm E83**, ISO 9513, and other similar standards. These standards require bias error requirements which are a common source of confusion. Example: 25mm gauge length extensometer, to **Astm E83** class B-1 and ISO 9513 class 0,5: Under **Astm E83** (Table 1): Error of strain not to exceed the greater of ± 0.0001 mm/mm or $\pm 0.5\%$ of value.
