2/12/2015 · Check Engine Light comes on:

Your Check Engine Light is the first indication that something has gone wrong, or is about to. It can mean any number of things, including transmission problems. There are sensors

throughout your vehicle that tell the on-board computer if anything unusual is happening, and a number of those sensors are located on

your transmission.

Unlike a gasoline engine, a diesel engine does not require an ignition system because in a diesel engine the fuel is injected into the cylinder as the piston comes to the top of its

compression stroke. When fuel is injected, it vaporizes and ignites due to the heat created by the compression of the air in the cylinder.
