23/12/2012 · Viruses are obligate intracellular agents that depend on host cells for successful propagation, hijacking cellular machineries to their own profit. The molecular interplay between host factors and invading viruses is a continuous coevolutionary process that determines viral host range and pathogenesis. The hepatitis C virus (HCV) is a strictly human pathogen, causing chronic liver injuries ...

Between 20% and 76% of them tested seropositive for PUUV [Reference Ulrich 30]. A more effective spread of PUUV can be expected with increasing vole populations because as more voles become newly infected the excretion of virus peaks in the acute phase of infection, i.e. in the faeces at 11–28 days and urine at 14–21 days post-infection, respectively [Reference Hardestam 31 , Reference ...

15/12/2011 · Author Summary Herpes simplex virus 1 (HSV1) establishes lifelong latent infections in the peripheral nervous system. After reactivation, progeny viral particles travel within sensory neurons towards sites of initial infection. There are conflicting reports what type of viral structures are transported: some studies observed non-enveloped capsids traveling while others reported transport ...

What is claimed is: 1. In a process for producing a peptide or a peptide derivative by using a reaction system of transcribing a DNA into an RNA and then translating the RNA produced or a reaction system of translating an RNA in vitro, wherein the improvement is all protein components of the reaction system are labeled with a first substance which adheres to a second substance, and said second ...

“Clinical microbiology informatics” is the use of information (e.g., data, knowledge, and results) and information tools (e.g., software, databases, and rules) in the “science and service dealing with detection, identification, and antimicrobial susceptibility testing” of clinically relevant microbes and the communication of these results to clinicians ().

1/6/2011 · TNF- α , a pro-inflammatory cytokine produced by multiple cell types including macrophages and lymphocytes, has been shown to interact with the insulin receptor substrate to attenuate the effect of insulin binding to its receptor. ⁷⁴ This cytokine is also produced by adipose tissue and is thought to mediate some of the effect of increased adiposity on insulin resistance in the general ...

On October 5, 2020, the Nobel Foundation announced that Harvey J. Alter, Michael Houghton, and Charles M. Rice were to be the recipients of the 2020 Nobel Prize in Physiology or Medicine in recognition of their roles in the discovery and initial characterization of hepatitis C virus (HCV), the infectious agent responsible for what had been described as non-A, non-B hepatitis (NANBH).

Abstract. Banana bunchy top virus (BBTV; family Nanoviridae, genus Babuvirus) is a multi-component single-stranded DNA virus, which infects banana plants in many regions of the world, often resulting in large-scale crop losses. We analyzed 171 banana leaf samples from fourteen countries and recovered, cloned, and sequenced 855 complete BBTV components including ninety-four full genomes.

10/12/2018 · The development and use of the 3-hydroxy-3-methylglutaryl coenzyme A (HMG-CoA) reductase inhibitor (statin) class of drugs, which, according to the prescribing information, reduce low-density lipoprotein cholesterol (LDL-C) on average by 55% to 60% at the maximal doses of the most potent statins, has had a major impact in reducing the incidence of cardiovascular diseases (CVD), ...

21/1/2006 · General Results. Estimates of cumulative research funding in environment and health safety research were calculated for each agency from the years 2000-2004 (Table 2). The largest agency funding environment and health safety research is NSF, which contributed an estimated \$63.9 million during 2000-2004 (approximately 6.9% of NSF's \$926 million NNI contribution over this time period).

Visakhapatnam campus. Established in 1980 as a main-campus of GITAM. Nestled in between the valley of Eastern Ghats and Bay of Bengal, the location is the most idyllic places in Andhra Pradesh.

SUMMARY Billions of tons of desert dust move through the atmosphere each year. The primary source regions, which include the Sahara and Sahel regions of North Africa and the Gobi and Takla Makan regions of Asia, are capable of dispersing significant quantities of desert dust across the traditionally viewed oceanic barriers. While a considerable amount of research by scientists has addressed ...
