Cryptography is defined in Webster's 9th New Collegiate Dictionary as the art and science of "enciphering and deciphering of messages in secret code or cipher".

Cryptographers have traditionally gauged the power of the cipher, i.e., “a method of transforming a text in order to conceal its meaning”, by the difficulty posed in defeating the algorithm used to encode the message.

Since 2012, he organizes the PROOFS workshop, which brings together researchers whose objective is to increase the trust in the security of embedded systems. Sylvain is also lead editor of international standards, such as ISO/IEC 20897 (Physically

Unclonable Functions) and  
ISO/IEC 20085 (Calibration  
of non-invasive testing  
tools).
