Focal neuropathies represent a rare but clinically important and potentially challenging aetiology of pain in athletes. Diagnostic ultrasound is commonly used in the evaluation of nerve entrapments, and has several advantages over other imaging modalities, including high resolution, portability, lack of ionising radiation, low cost, point-of-care access, ease of contralateral comparison and ...

Ultrasound is a powerful diagnostic imaging modality useful for the evaluation of focal neuropathies in

athletes. Ultrasound can provide diagnostic information not readily available with other nerve imaging modalities, due to such features as dynamic imaging capability and ease of contralateral comparison.

4/6/2019 · Objective To evaluate the cost-effectiveness of neuromuscular ultrasound (NMUS) for the evaluation of focal neuropathies. Methods A prior prospective, randomized, double-blind controlled trial demonstrated that NMUS, when added to electrodiagnostic testing, resulted in improved clinical outcomes after 6 months of follow-up. From this study, we abstracted quality-adjusted life-years ...

**CONCLUSIONS** Ultrasound is a powerful, noninvasive tool for the examination of peripheral nerve injuries, and can guide diagnosis of and surgical strategy for focal peripheral nerve injuries. It allows direct visualization of the cause and extent of nerve lesions and finds its place between electrodiagnostic tests and exploratory surgery.

1/7/2012 · Ultrasound (May 2011) shows focal enlargement of the nerve in the distal part of the popliteal fossa, corresponding to the site of the previous conduction block: the CSA of the nerve is 13.9 mm<sup>2</sup> (11.6 mm<sup>2</sup> at the fibular head), and the nerve is hypoechoic. The same focal enlargement (arrow) is also shown on a longitudinal scan. (C) Left radial ...

2/4/2017 · The appearance of peripheral nerves on ultrasound due to focal injury or generalized disease can be variable and is often related to the extent of the pathology. Focal neuropathies often present with abnormal swelling that is usually just proximal to the site of the injury (Figure 9.16).

4/12/2007 · Electrodiagnostic studies are traditionally used in the diagnosis of focal neuropathies, however they lack anatomical information regarding the nerve and its surrounding structures. The purpose of this case is to show that high-resolution ultrasound used as an adjunct to electrodiagnostic studies may complement this lack of information and give insight to the cause.

Early treatment of anterior interosseous nerve palsy with hourglass-like fascicular constrictions by interfascicular neurolysis due to early diagnosis using ultrasonography: a case report.

Peripheral nerve ultrasound (US) has emerged as a promising technique for the diagnosis of peripheral nerve disorders. While most experience with US has been reported in the context of nerve entrapment syndromes, the role of US in the diagnosis of peripheral neuropathy (PN) has recently been explored. Distinctive US findings have been reported in patients with hereditary, immune-mediated ...
