A fully-charged battery should read about 12.5V; at any reading lower than about 10V the starter motor will not turn over or will do so very weakly -- and the plugs will probably not fire. The battery terminal connections may be loose or corroded.

29/4/2021 · Volkswagen claims that their new ID.4 GTX can cover a maximum distance of 480kms under the WLTP cycle on a fully charged battery pack – which is remarkably close to the standard ID.4's 500 ...

An automotive battery or car battery is a rechargeable battery that is used to start a motor vehicle. Its main purpose is to provide an electric current to the electric-powered starting motor, which in turn starts the chemically-powered internal combustion engine that actually propels the vehicle. Once the engine is running, power for the car's electrical systems is still supplied by the battery, with the alternator charging the battery ...

29/8/2018 · TI the contact owns a 2009 Volkswagen Cc. On several occasions, after the vehicle was parked overnight, the battery became drained and the vehicle failed to start.
